FEMA Region II – Hurr

During a Hurricane: If you are staying home, here's what you should do:

- Monitor the radio or television for weather conditions and updates.
- Do not go outside, even if the storm appears to have subsided. The calm or the "eye" of the storm can pass quickly, leaving you outside when strong winds resume.
- Stay away from all windows and exterior doors, and seek shelter in a bathroom or basement. Bathtubs can provide some shelter if you cover yourself with plywood or other materials.
- Evacuate to a shelter or a neighbor's home if your home is damaged, or if you are instructed to do so by emergency personnel.
- If power is lost, turn off all major appliances to reduce the chances of damaging a power surge.
- Do not handle electrical equipment and do not use the telephone except in an emergency.
- Regardless of whether you stay or leave, it is important to unplug appliances and electronics, and remove air conditioner fuses to avoid damage caused by power surges when lines and power are restored.
